Profile

I am a 24-year-old Software Engineer with a multicultural background, being half Dutch and half Greek. Currently, I work at Catharina Hospital in Eindhoven, where I contribute to developing and implementing software solutions that enhance healthcare operations. I hold a Bachelor's degree in ICT & Software Engineering from Fontys University of Applied Sciences, where I specialized in Artificial Intelligence. My academic journey has equipped me with strong problem-solving abilities and technical expertise, particularly in AI-driven applications and backend development.

Beyond my professional pursuits, I am passionate about an active lifestyle. During the week, I practice calisthenics, focusing on strength, mobility, and bodyweight training. On weekends, I dedicate my time to sailing, enjoying both the technical aspects and the challenge of navigating different conditions. These activities not only keep me physically engaged but also strengthen my discipline, adaptability, and focus—qualities that I carry into my professional work as well.

Skills

- Resource Management
- Communication
- Project Management
- Time Planning
- Leadership
- Artificial Intelligence
- AI Engineering

Experience

Catharina Ziekenhuis

2 yrs 1 mo

Eindhoven, Noord-Brabant, Nederland

AI Engineering · Communication · Problem Solving

(Junior) Software Engineer

Part-time

Jul 2023 - Present · 1 yr 8 mos

I am currently employed at the hospital as a Software Engineer. In this role, I focus on developing and implementing solutions tailored to the hospital's needs. This includes designing and building in-house software solutions, as well as integrating existing technologies to improve hospital workflows and operation.

Intreship

Feb 2023 - Jun 2023 · 5 mos

I completed my graduation internship by developing an application that integrated an AI-based fall detection model capable of identifying fall incidents based on nurse notes. My primary responsibility was automating the data processing pipeline, ensuring seamless extraction, formatting, and feeding of notes into the AI model while efficiently storing the results. This system was later integrated with other hospital components to provide deeper insights into the quality of care. Throughout the internship, I strengthened my AI engineering expertise, enhanced my ability to collaborate within a multidisciplinary team, and refined my communication skills in a professional healthcare setting.

Experience

Greek Army

9 mos

Chios, North Aegean, Greece

Resource Management · Organizational Skills · Team Work

Conscript Private

Sep 2023 - Jun 2024 · 9 mos

I successfully fulfilled my mandatory military conscription in Greece, serving in the Armored Vehicles branch. During my service, I took on responsibilities beyond the typical duties of a private, including planning and scheduling soldier shifts, a task usually assigned to higher ranks. Additionally, I was involved in administrative work. These responsibilities further helped enhance my organizational and resource management skills. My dedication and performance were recognized with an honorary discharge and the honorary rank of Private First Order.

D-Centralize

1 yr 5 mos

Eindhoven, Noord-Brabant, Nederland

Time Management · Problem Solving · Software Development

(Junior) Software Engineer

Part-time

Feb 2022 - Jan 2023 · 1 yr

After completing my internship, I continued working part-time at the company alongside my studies, further contributing to the development of the CMS application. My responsibilities included maintaining, rewriting, and enhancing backend APIs, such as improving the payment flow. This experience allowed me to deepen my expertise in backend development while balancing academic commitments, further strengthening my problem-solving, time management, and software engineering skills.

Internship

Sep 2021 - Jan 2022 · 5 mos

I completed my Semester 4 internship by leading the migration of the customer database from a Google NoSQL solution to a self-hosted PostgreSQL database for the company's CMS, which enables clients to manage their accounts and subscriptions. This process involved not only data migration but also rewriting key components responsible for communication between the application and the database.. Successfully executing this project required careful planning and time management, skills that I significantly developed throughout the internship.

Education

Fontys University of Applied Sciences / Bachelor's degree, ICT & Software Engineering

Sep 2019 - Jun 2023 · 4 yrs

Eindhoven, Noord-Brabant, Nederland

I completed my Bachelor's degree in ICT & Software Engineering at Fontys University of Applied Sciences, graduating cum laude. During my studies, I developed a strong foundation in software development, system design, and IT infrastructure. In semesters 5 and 7, I specialized in Artificial Intelligence, focusing on data processing, AI model development and the application of AI models in real world scenarios.

1st Vocational High School of Chios / High School Diploma, and Vocational Education Diploma level 3 (Application Development)

Sep 2016 - Jun 2019 · 3 yrs

Chios, North Aegean, Greece

I graduated as the valedictorian from the 1st Vocational High School of Chios with a perfect score. Alongside core subjects such as Mathematics and Chemistry, I specialized in Software Development, where I studied Python, Networking, and Web Development, along with other subjects. These courses provided a strong foundation for my professional and technical skills. Additionally, my participation in the student exchange Erasmus program enriched my educational experience, allowing me to collaborate with international peers who shared a similar academic path. This experience further enhanced my adaptability, and teamwork skills, all of which are valuable in my personal and professional development.
